

# Robotic Process Automation (RPA)

## Readiness Check

### Is your business ready for the RPA revolution?

A good business process is the backbone for successful RPA. However, it is hard to know whether your processes are RPA ready.

The eCapital Advisors RPA readiness check will:

- Host an executive **presentation** around the art of the possible with RPA
- Review current **processes** and indicate which are prime for RPA
- Suggest **changes** to help make your processes RPA ready
- Create a **ranking** of which processes to tackle first

At the end of the assessment, receive a playbook detailing the process evaluation, your overall RPA readiness score, RPA suggestions, and next steps to start your journey.

---

### About RPA

RPA developers use software to create bots which replicate an employee's actions in a virtual environment. In short, it's a program that follows a set of rules to complete a task such as clicking, emailing, reading pdfs, or running analysis in Excel. RPA enables a workforce to automate tasks that are often high volume, tedious, and disengaging to allow the workforce to do more fruitful and engaging work.
